- Identifies and protects your enterprise
- Delivers incident response to organisations
- Minimises downtime
- Saves time, money and reputation

### Incident Response

- Available ad hoc or upon retainer
- Proactive and reactive threat response
- Comprehensive remediation and deployment

## Security Monitoring & Incident Management

### Vigilance & Response At A Higher Level

Some companies contract two separate vendors: one for event monitoring, and another for incident response and remediation. This means high costs, slow response times, miscommunication, service-level agreement conflicts - those have negative effects on reputation and revenue. ARMR is a single solution. ARMR is uniquely positioned to provide organisations with a single-source, one-step solution.

### Detecting & Managing The Inevitable Compromise

ARMR's full-service monitoring and response solution gives control back to organisations. ARMR security and monitoring solutions, managed by our team of certified security analysts, offer the focus and expertise required to meet objectives - in place, on point, 24/7/365. ARMR Incident Management capabilities offer response protocols that contain and remediate imminent threats, and minimise impacts on organisations. In the midsts of a crisis, ARMR reacts immediately. Even better, ARMR can be proactive in identifying compromising before the crisis becomes full-blown.
